

About N-K Manufacturing

N-K Manufacturing Technologies LLC was originally founded in 1995 in response to customer demand for injection molding capabilities specializing in insert and multi-shot molding.

In January of 2006, N-K Manufacturing was purchased by two of the original founders, brothers Haig and Armen Kassouni, to broaden existing capabilities in order to support the growing requirements of our customers.

Started with two presses and four employees in a 9,000 square-foot facility, N-K Manufacturing has grown to more than 100 employees working in a 75,000 square-foot plant.

The Company initially supplied the automotive and office furniture industries.

Today, N-K Manufacturing specializes in niche technologies such as vertical insert molding, two-shot / multi-shot molding, and overmolding processes that promote the conversion of traditional metal components to plastic and improve the ease of assembly.

Our Grand Rapids manufacturing facility is supported with an internal R & D department and a sales team working throughout the Tri-State area.

N-K Manufacturing makes a broad range of components for the automotive, office furniture, consumer goods, appliances, construction and other industries.
